## **DETAILED ACTION**

1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

## Claim Objections

2. Claim 2 is objected to because of the following informalities:

In claim 2, line 2, "through f" should read - - through e --.

Appropriate correction is required.

## Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.
- 4. Claims 1-11 are rejected under 35 U.S.C. 102(a) as being anticipated by U. S. Patent No. 5,831,853 to Bobrow et al.

With respect to claims 1 and 8-11, Bobrow et al. disclose a method for computer-supported error analysis of at least one of sensors and actuators in a technical system, the error analysis being in a form of a status finite description that exhibits statuses of the technical system, the method using a computer, comprising the steps of: a) determining a status-finite description of the technical system for an error case of an error of at least one of a

sensor and an actuator in the technical system (see col. 1, lines 14-34; col. 1, line 62 to col. 2, line 10; col. 5, lines 59-62; and col. 9, lines 16-30); b) determining a first set of achievable statuses for the technical system; c) determining a second set of achievable statuses for the technical system having an error forming a difference set from the first set and the second set; and e) determining result conditions from the difference set, the result conditions meeting prescribable conditions (see col. 5, lines 1-58 and col. 15, line 50 to col. 17, line 6).

As to claim 2, Bobrow et al. also disclose method steps a) through e) being implemented for all possible errors of sensors and actuators in the technical system (see col. 2, lines 48-50; col. 5, lines 1-28; and col. 7, lines 55-67).

As to claim 3, Bobrow et al. also disclose failure probabilities being allocated to the sensor and in which the error analysis ensues taking the failure probabilities into consideration (see col. 9, lines 24-30).

As to claim 4, Bobrow et al. also disclose method steps b) and c) ensuing according to a method of model checking (see col. col. 2, lines 18-27 and col. 5, lines 1-11).

As to claim 5, Bobrow et al. also disclose a status-finite description of a process implemented by the technical system (see col. 1, lines 14-34; col. 1, line 62 to col. 2, line 10 col. 5, lines 59-62; and col. 9, lines 16-30).

As to claim 6, Bobrow et al. also disclose the status-finite description being realized by a finite automat (see col. 2, lines 51-56 and col. 5, lines 59-62).

As to claim 7, Bobrow et al. also disclose the status-finite being a form of a binary decision diagram (see col. 32, lines 33-38).
